

11  
a connector integral with the proximal end of the catheter including at least one detent for securing said connector in the central opening of the transfer device, said detent being manually actuatable to release the catheter from the central opening of the transfer device.

Sub D17  
22. (Twice Amended) The catheter of Claim 21 further comprising at least one radiopaque marker for aligning said distal end and the at least one treating element with the selected site of the body of the patient, said radiopaque marker being located within said first lumen at said distal end and providing a fluid flow path between said first and second lumen.

Sub D17  
39 (Amended). The catheter of Claim 38 wherein said lining comprises a polyethylene blend of a high density polyethylene and a low density polyethylene.

### REMARKS

Applicants will address each of the Examiner's rejections in the order in which they appear in the Office Action.

#### Claim Rejections - 35 USC §112

The Examiner rejects Claims 19-20, 22 and 39-40 under 35 USC §112, second paragraph, as being indefinite.

In particular, the Examiner objects to the recitation in Claim 39 of a high density/low density polyethylene as being unclear and has interpreted it as being one or the other. Applicants respectfully submit that this was not their intended meaning for the claim. Rather, as clearly stated in the specification on page 36, Ins. 10-12, 21-26, a polyethylene blend which consists of a certain
